
13 March 2008 11:32:00 AM - New platform lifter range from Bioinox

Bioinox has added a new range of **platform** lifters to its already long list of products, including passerelles (external, retractable, rotating), swimming ladders and davits. The two platform lifter models 'Murano' and 'Torcello' (*pictured below*) control the lifting and descent of a platform, with a stainless steel structure and automated movement. Lifting arms are available in a range of custom sizes depending on requirements, with lifting capacities from 600kg for the 'Torcello' to 100kg for the 'Murano'.
